

# Quasar AI Treats

ZERO ENGINEERING / AI SERVICES

## Your boat, set up by AI.

Quasar AI Treats are AI services, priced separately. You send photos, lists and a spreadsheet. Our AI service centre does the work and sends you a link to check. You pay only for the AI tokens used.

### Zero engineering

Fill in a spreadsheet, take photos or write a list. The AI does the rest.

### Customisation

A 3D image of your own boat, the items you choose to animate, your manuals and your own rules.

### Easy implementation

Upload, check the link we send back, then accept or redo. Nothing changes until you confirm.

#### THE THREE AI TREATS

### Boat Customisation

Your boat in 3D, animated, with its manuals and your rules.

- 1 Photograph your boat, the more photos the better, and upload them. We send a link to a 3D image of your boat. Add photos until it is right.
- 2 Upload a list of the items to animate. Each one comes back highlighted. Accept or redo.
- 3 Photograph a product and its serial number. We send its manual for you to confirm.
- 4 Tell us your rules, such as security limits. The AI talks them through and confirms the conditions you set.

### Engineering Configuration

Commissioning your digital switching from one spreadsheet.

- 1 Download the spreadsheet template.
- 2 Fill in each device: name, location, device ID, channel and the digital output it drives. Upload it.
- 3 We ask you to confirm before anything is set. Once you confirm, the AI configures the system.
- 4 When it is done, you get a link to the configuration tables.

Works with STAR, Shelly, Matter, and Victron through a GX device.

### Asset Management

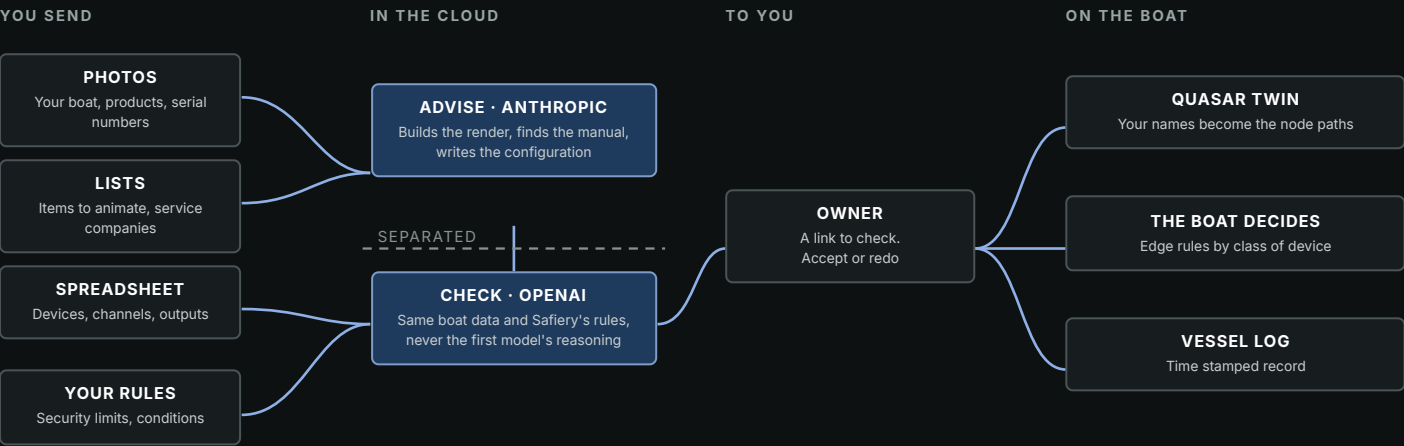

The right service company for every product on board.

- 1 Link your Quasar ONE ID.
- 2 Upload a list of the service companies you use and what each one covers. A photo of a handwritten list or a spreadsheet both work.
- 3 We send back the service companies and the products each one covers on your boat.

Every treat starts the same way: log in, set up your credentials, register a payment method and link your Quasar account. Each treat is priced separately, based on the AI tokens used.

# LLMs do the work. But the AI harness keeps it safe.

Every treat runs inside the Quasar AI harness. One AI model does the work, a second model from a different vendor checks it, and nothing reaches your boat until you confirm. On board, the boat has the final say.

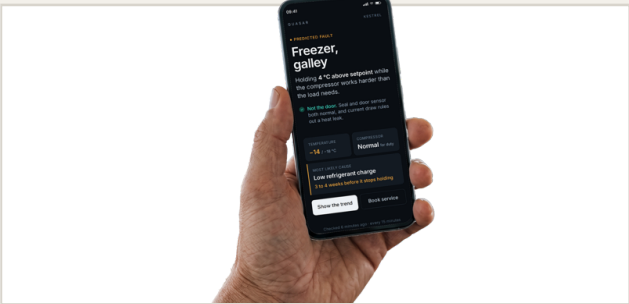

Conceptual architecture. Anthropic and OpenAI are trademarks of their owners.

**ZERO engineering.**

Photos. Lists. One spreadsheet. You never write code or open a setup tool. The AI does the engineering, a second AI checks it, and you approve it.

## Safe by design.

|                        |                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------|
| AI Harness             | This is the core product, not the LLM.                                                                                   |
| You confirm first      | Every render, manual and setting comes back as a link. Configuration starts only after you say yes.                      |
| Two vendors            | Anthropic proposes. OpenAI checks, but is not allowed to read the first model's thinking, so a mistake is not inherited. |
| Lights, fridges, pumps | Switched remotely, through the harness.                                                                                  |
| HVAC plant             | Request only. The boat sequences it.                                                                                     |
| Gensets, watermakers   | No remote command path at all.                                                                                           |
| Open protocols         | STAR, Shelly, Matter, and Victron through a GX device. Closed systems are not configured.                                |

QUASAR APP / ALERTS ON YOUR PHONE

## What the harness adds.

Benefits that last the life of the boat.

**Your names, used everywhere.** One name per device, from the sensor to the advice.

**A history that keeps.** JetStream over NATS holds every reading, even with the link down.

**A vessel log, made for you.** Subscription after the first year.

## Let's set up your boat with AI.

Bring your photos, your device list and your service companies.
